EXPERIENCE

2015-2017

SELF-EMPLOYED

BERLIN, GERMANY

Contract Engineer

Worked a variety of contract software engineering jobs while enjoying a break from the startup life.

- Learned German up to level B1.
- Attended several classes in machine learning.
- Saved \$120,000 off a client's annual AWS bill.
- Perfected my remote-working home office.

2012 - 2015

PLANET LABS

SAN FRANCISCO, CA

Director, Mission Control

As one of the first ten employees at Planet, I wore many hats, moving from the Spacecraft team to Manufacturing to Mission Operations. I probably transitioned (started-and-handed-off) more code than anyone else in the company. All told, I had an active role in designing, building, testing or flying Planet's first 113 satellites. Selected accomplishments:

- Designed and developed 2/3 of the microcontroller code for our first spacecraft and significant portions for our second. This code handled power, inter-processor communication, scheduling, sensor acquisition, telemetry and commands. [\[C on PIC, then C on ARM\]](#)
- Implemented the camera software responsible for the first 10,000 photos taken from orbit. [\[C++ on SBC\]](#)
- Started and maintained the company's continuous integration and deployment system. [\[first Vagrant/shell scripts, then Jenkins/Ansible on OpenStack, finally Jenkins/Ansible on AWS\]](#)
- Co-started and maintained the company's code review system. [\[Redmine, then Phabricator\]](#)
- Promoted to Lead the Mission Operations team through Flock 1a.
- Architected/programmed large portions of Mission Control. [\[Python/Django on Postgres, with monitoring \(Nagios, New Relic and ElasticSearch\), satellite tasking \(Celery and RabbitMQ\), caching \(Memcache and Redis\), and user interfaces \(Javascript/Jquery/D3/High Charts/Graphite/Bootstrap and Backbone\)\]](#)
- Drove long-term strategy of team composition. Gave performance reviews, interviews and managed employee lifecycle before there was an HR department.
- Expanded remote worker infrastructure by evangelizing ChatOps. [\[HipChat/Coffeescript\]](#)
- Co-lead software development for Manufacturing and Production. [\[REST API in Python/Flask, website in Python/Django, GSE in Arduino/RaspberryPi\]](#)
- Added frontend unit testing to the Manufacturing Team's CI process. [\[Backbone/Jasmine\]](#)
- Mentored several interns and new hires across multiple teams.
- Actively shaped company culture, advocating for the unique artist-in-residence program.

2007 - 2012

INFORMATION SCIENCES INSTITUTE

MARINA DEL REY, CA

Research Satellite Engineer, Space Engineering Research Center

Designed guidance, navigation and control systems and managed students on several microsatellite research programs. This position began as an unpaid graduate student and turned into a full time job upon graduation.

Selected accomplishments:

- Programmed, solely, the entire flight software system for USC's first Cubesat, launched December 8, 2010 aboard SpaceX's Falcon 9 rocket. (see Publications #1) [\[C on PIC\]](#)
- Implemented the attitude control system for the first-ever surface tracking Cubesat, launched in July 2012. (see Publications #2) [\[C on PIC, MatrixX/Simulink on Windows\]](#)
- Published research on rendezvous and proximity operations using a vision-based autonomous tracking system. (see Publications #3) [\[OpenCV and HAAR classifiers\]](#)
- Designed and programmed the control systems for thruster-based microsatellite prototypes, involving Kalman filtering, computer-assisted docking and PID and phase plane controllers. [\[C on Rabbit\]](#)
- Developed functional and environmental test requirements for the Aeneas Cubesat program and served as Integration and Test Director.
- Created an Application Programming Interface (API) for commanding microsatellites over a wireless TCP/IP network using a Rabbit 4000 microcontroller. [\[C on Rabbit\]](#)

2006 - 2009

STINGER GHAFFARIAN TECHNOLOGIES (SGT)
Systems Engineer, Mission Systems Engineering

UPPER MARLBORO, MD

Managed NASA Goddard Space Flight Center's Requirements Database and designed satellite propulsion subsystems. This position began as a full time job and faded to part-time upon entry to graduate school. Selected accomplishments:

- Created tools to help with propulsion subsystem design, including automated tank sizing, plume impingement calculations, delta-v budgeting and cost/weight estimations. *[Visual Basic]*
- Implemented significant cost savings through autonomous linking of requirements and developed tools for parsing, characterization and trace development. *[Visual Basic]*
- Worked remotely for 2 years, receiving high praise on deliverables and performance evaluations.

2003 - 2006

FAA OFFICE OF COMMERCIAL SPACE TRANSPORTATION
Aerospace Engineer, Licensing And Safety Division

WASHINGTON, DC

Oversaw amateur rocket launches and regulation development. Conducted safety analyses for license and permit applications. Performed on-site safety inspections and compliance monitoring. Selected accomplishments:

- Maintained flawless safety record of the amateur rocket community.
- Drove final team concurrence on regulations that had been stalled for 12 years. (see Publications #4)
- Cut \$100,000 in costs through prudent contract management.
- Elected by colleagues as Employee of the Year, elected by management as Top Performer.
- Experienced with all Range Safety analyses, including:
 - 6-degree-of-freedom trajectory simulation, dispersion and malfunction turn analyses
 - Blast overpressure calculations, damage modeling, debris generation and fragmentation distance
 - Probability-of-impact, cumulative risk assessment
 - FMECA, Fault Tree Analyses, Hazard Analyses
 - *[Technologies used: POST, OrSAT, STK, Splash, TaOS, Maple, Visual Basic]*

EDUCATION

CONTINUING EDUCATION

ONLINE

Coursera/Udacity

- Machine Learning - Andrew Ng - Stanford University
- Conflict Management - Najla DeBow - UC Irvine
- Software Testing - John Regehr - Udacity

UNIVERSITY OF SOUTHERN CALIFORNIA

LOS ANGELES, CA

M.S. Astronautical Engineering

- Interdisciplinary coursework in control systems, robotics, filtering, estimation and artificial intelligence.

EMBRY-RIDDLE AERONAUTICAL UNIVERSITY

DAYTONA BEACH, FL

B.S. Engineering Physics. Minor in Mathematics

- Senior Design team placed 1st and 3rd in two separate competitions for designing a reusable cargo shuttle between Earth and Mars.
- Recipient of the "Most Outstanding Student" Award.

LANGUAGES

English (C2-native), German (B1-intermediate)

PERSONAL

Certified Rollerblading Instructor, SCUBA diver, Snowboarder, Drummer, Hiker, Amateur Photographer.

SKILLS

Summarized software experience:

- **Automation/Build/CI:** Jenkins, Ansible, Fabric, Celery, Selenium
- **CAD:** AutoCAD, Microstation, CATIA, Pro/E, Solid Works
- **Cloud:** AWS, GCE, esp. Kubernetes
- **Database/Storage:** MySQL, PostgreSQL, Redis, Memcache
- **Frontend:** Angular, Django, Backbone, D3/Highcharts, JQuery
- **Graphical Programming:** LabView, Simulink, SystemBuild
- **Languages:** Visual Basic, C/C++, Python, Javascript, Coffeescript, Groovy
- **Mathematics:** MatLab, Maple, MatrixX
- **Machine Learning:** Tensorflow, Octave
- **Metrics:** ELK Stack (Elasticsearch/Logstash/Kibana), Nagios, Graphite/Graphana, Sumologic
- **Specialized Application/Libraries:** OpenCV, OrSAT, POST, STK, Splash, TaOS
- **Virtualization:** LXC, Vagrant, OpenStack, Docker, Kubernetes
- **Graphics and Video:** Photoshop, After Effects, Gimp, MS Movie Maker, OpenShot, Scribus
